

Bi Folds (odd number of doors)

If you want to stack bi folding doors to the right, the main door will be situated on the left. The door will pivot open to the right, to rest against the next door. Those doors will be pushed against the remaining doors as they fold, for all doors to stack on the right.

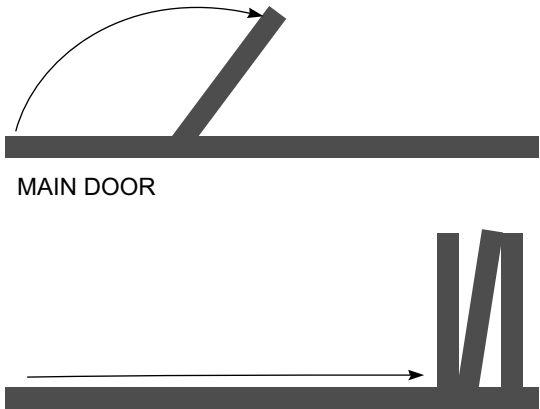

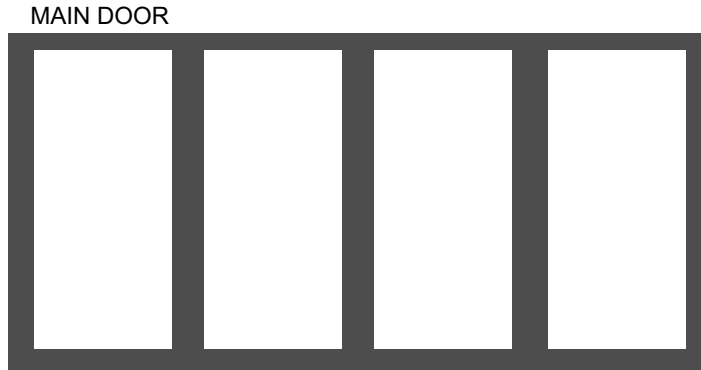

Illustration is for outward opening doors stacking to the right with a main door to the left.

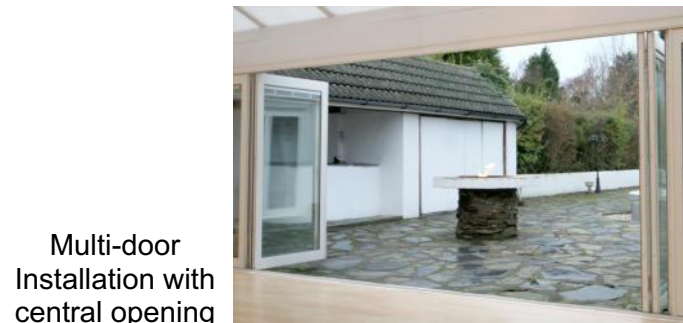

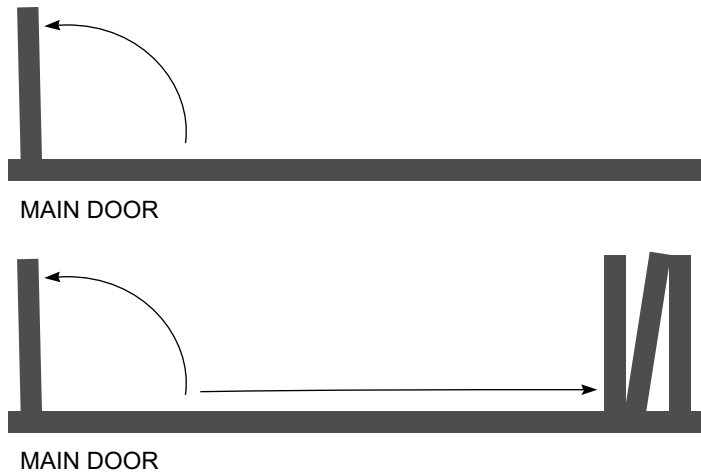

Doors may also stack to the left with the main door to the right or the door can be central (see even-door illustration & image, right).

Inward opening doors may also be specified.

Bi Folds (even number of doors)

Depending where you choose to position the main door (edge or central), doors will rest at both sides of the opening.

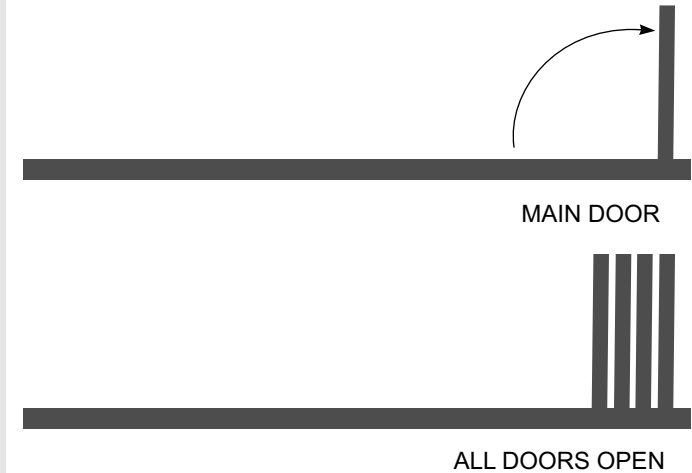

Multi-door Installation with central opening

Slide-Pivot Doors (all versions)

If you want to stack slide-pivot doors to the right, the main door will be situated on the right. The door will pivot open to the right, then each door can slide individually towards the first door and pivot open to rest against it, until all doors are stacked on the right.
